Hospital Lane Dental and Implant Clinic has been designed to offer exceptional facilities and comfort for patients, providing state-of-the-art dental implant services. A team of experienced implant dentists is on the premises 6 days a week to give expert patient care.

A dental implant is a small titanium screw that replaces the root of a missing tooth. The implant integrates with the jaw and becomes the support for the replacement tooth. Dental implants can be used to replace single teeth with crowns or multiple missing teeth with bridgework to look and work like natural teeth.

We are able to offer **“Tooth Now”**, a treatment that allows the removal of a failing front tooth, placement of implant and provision of a replacement temporary crown all in one visit. We also offer **“Teeth Now”**, where all teeth in a jaw are replaced with the minimal amount of implants and temporary bridgework fitted on the same day.

-  **New Purpose-Built Clinic**
-  **Implant Dentists 6 days a week**
-  **On-Site Cone Beam CT Unit**
-  **Tooth Now - Immediate Single Tooth Replacement**
-  **Teeth Now - Immediate Multiple Teeth Replacement**
-  **On-Site Laboratory**
-  **Competitive & Inclusive Prices**
-  **Advanced Implant Techniques**
-  **Nobel Biocare Dental Implants**

Implant surgeons at Hospital Lane Dental Clinic use techniques which, wherever possible, allow placement of the dental implants using keyhole surgery. This method means there is a minimal amount of manipulation of the soft tissues and this reduces the healing time. Patients often comment on the nominal post-operative discomfort associated with dental implants, so that they are able to carry on with their busy lives without the inconvenience of multiple dental appointments.

At Hospital Lane Dental Clinic a team of dental surgeons have been working together since 1989 using Nobel Biocare dental implants to provide solutions to their patient’s problems. The implant team has attended advanced courses throughout Europe and America. Our experience and use of the most up-to-date techniques enables us to offer dental solutions not available at routine dental practices by virtue of CT scans, experienced implant dentists available daily, extensive stock of implant components and our on-site laboratory.
